Market Master 
The Best Yet in Technical Analysis

Readers Choice
Finalist Award
for Stocks &
Commodities in
2001

About PrimeCharts

PrimeCharts has been developing, manufacturing and maintaining stock market related software since its inception in 1986. Under the original company name **EasySoft**, the flagship product, Market Master was introduced in 1987 in the form of the Market Master suite of programs for DOS and then launched as the first range of Stock Market Software for Windows in South Africa. It has since become a leading software package in both South Africa and Australia and has now branched into the United Kingdom. **PrimeCharts** has users of this exciting range of analysis software throughout the world. Market Master 2000 was given the Readers Choice Finalist Award for Stocks & Commodities in 2001.

PrimeCharts also provides the most comprehensive data feed for the South African Stock market, all share prices, gilts, bonds, equities, unit trusts and all the major overseas indices. **PrimeCharts** is now providing the ASX, LSE, AIM, NASDAQ, NYSE and AMEX data feed as well. **We are proud to be the first seamless multi-stock market software developer in the world.**

PrimeCharts is currently developing Market Master X-ec as an additional advanced technical analysis tool for all **Bloomberg Terminals**. For more info on this - [click here](#)
Market Master X-ec will be available to end of day users during the first quarter of 2004

To the users of **PrimeCharts** software, it provides Market Reports, Local and international News headlines, program updates announcements as they are released as well as company announcements, upcoming events and general news.

Market Master X-ec for Bloomberg Terminals

Market Master's Philosophy

Technical Details

Pricing

Beta Testers Needed

Market Master X-ec has all the features you would expect of a technical analysis package to chart any data stream. Many of these features are detailed in the A5 brochure that is part of this Market Master X-ec for Bloomberg's information pack. These items are also detailed under the section "Technical Details" at the end of this document.

Market Master X-ec Features

User Friendly

Market Master X-ec is a true 32-bit windows object oriented program. As such all items (trend lines, indicators, etc.) are context sensitive and have their own 'right-mouse button' menus that make performing all charting tasks extremely easy, even for the first timer and/or those that are computer illiterate. Context sensitivity extends to the online help system, which provides extensive help to supplement the comprehensive printed documentation. All features are accessed via right mouse clicks, or buttons, and/or menu commands – whichever you prefer will work!

Share Manager

One of the main features of Market Master X-ec is the Share Manager. The tens of thousands of equities available from Bloomberg's for the 222 exchanges of the world have been divided into their market categories and come pre-supplied with Market Master X-ec (and are constantly updated). This means that users can utilize a simple top-down approach for locating and charting items. Select the desired exchange and all the shares for that exchange are displayed (with their full descriptive name). Either type or use your mouse to locate the desired item. If you select a market sector (eg. Banks), all the securities in that sector are displayed, allowing quick and effortless location of items. Alternatively, if you know the Bloomberg code for the desired item, you can just type it in. Using the Share Manager you can group items together (called Series) from across markets and exchanges, giving the group an intelligent descriptive label. You can create as many groups/series as desired and then move from a chart of one to the next with a single mouse/key click.

Screen Layouts

All the work you do on a specific chart (trend lines, moving averages, notes, etc..) are saveable and can be either manually or automatically re-displayed the next time you view that item. In addition, you can create screen layouts or templates (a chart with one or more Indicators/Moving Averages of pre-defined periods, etc.) that can be applied to any chart by a single mouse click.

Scanner

The Market Scanner tests any item, group of items (within one, or across many exchanges), market sector and/or exchange for one or more indicator scenarios you have selected. The scanner requires zero programming as it comes with dozens of popular tests. You can with minimal effort design your own unique market strategies. For example you could test all the UK Retail shares to see which ones have a 13-day RSI indicator that is below 30 and has just turned up giving a buy signal. You can chart the entire set of results or any single item. You can save the results as a list of shares (make a new series with them in Market Master terminology). You can create and save for quick use as many different tests as needed. Test scenarios can contain up to 10 different indicators plus moving averages. You can also perform tests of test, etc..

Market Master's Philosophy

Market Master X-ec was designed by traders and investors to make their life easier. Each day we need to look at a number of key equities, indices, cross-rates, etc. to get a feel for the market. This is done effortlessly with the Market Master X-ec Series feature where you can page up or down through lists of pre-selected items in seconds. As you look at a chart, you want to quickly recall any trend lines or notes you made in the past. This is done either automatically, or with a single click using the Workbook feature. Next you want to get a number of different perspectives by quickly looking at the signals a number of different indicators are giving. Market Master's "Function Key" overlay system does this, changing indicators (and associated periods) with a single mouse click. Using these features, in just 10-15 minutes a user can have examined in detail 20-30 different equities, indices, etc., having looked at 4-5 different screen layouts (each comprising of one or more indicators) for each. Thus the project of creating and examining some 50 or more technical charts now takes

minutes, not hours!

Reducing the time you spend to make your decisions means that you have more time for your other pursuits, and you can widen your interests to other potential market profit situations. Using the Market Sector feature, you can with a single mouse click go through all the equities in a market sector (all retail shares for example), looking at them relative to that market sectors index, and finding those that are about to or are currently out-performing the market. A simple top-down approach lets you locate the top performing countries, followed by the best sectors in those markets and the actual market leaders in these sectors!

While you enjoy your spare time, why not allow Market Master X-ec to fully optimise your favourite indicators for all the shares you love to trade? Why not create you very own indicator using the power of all the functions available in Microsoft Excel? With Market Master, not only will you have the time and the financial resources to do so, you also have these tools!

Technical Details

Market Master's X-ec display consists of a user-selected number of windows (tiled or full-screen). Each window can contain a chart and indicator(s), Market Scans or Market optimisations. All Windows are separate threads (in computer terms, Market M X-ecaster is a multi-window, multitasking program) and can be accessed concurrently.

Charts:

Line, Volume, Bar, Candlesticks, Gann Swing and Point & Figure.

A chart can be Relative to any other data item (Equity, index, etc..) and/or expressed in another currency. One or more charts can be superimposed on the same screen or drawn below one another using a common date scale. If overlaid, charts can be compared based on actual data or normalized to base-100. In all instances, the vertical scale can be linear or logged. The time period of the viewed historic data can be Daily, weekly or monthly. Real time charts can be tick by tick or a pre-determined fixed frequency. Both historic and real-time charts of the same item can be viewed simultaneously.

Indicators:

Market Master X-ec comes with the following indicators: Anticipator, ATRE Stop, Average Directional Index, Average True Range, Average True Range Exponential, Average True Range Volatility, Average True Range Exponential, Bollinger bands, Candlesticks, Coppock, Deals, Deals Price Trend A, Deals Price Trend B, Directional Movement Index, Double Momentum, Earnings Yield, Exponential Oscillator, Gann Swing Chart, Wide Gann Swing Chart, Harbinger, High Historic Volatility, KST, Kurtosis, Linear Oscillator, Linear Regression, M.A.C.D., M.A.C.D. Histogram, Momentum, Negative Directional Movement, Negative Deals Index, Negative Volume Index, On Balance Deals, On Balance Volume, On Balance Volume %, Overbought/Oversold, Parabolic (SAR), Point Movement Oscillator, Positive Deals Index, Positive Directional Movement, Positive Volume Index, PE Ratio, Probability, RSI, Relative Strength Comparison, SIROC, Slow Stochastic, Smoothed Williams' %R, Stochastic, Stop Loss, Velocity Accelerator, Volatility Stop, Volume, Volume Accumulation, Volume Price trend (A), Volume Price trend (B), Williams' %R.

In addition, an unlimited number of Simple, Complex, Weighted and/or Exponential moving averages, along with Fourier Smoothing can be applied to any chart and/or indicator. The Custom indicator interfaces into Excel and utilises any formula you may create then in.

Tools:

Users can apply Trend Lines and market channels. These can be saved and repositioned if needed all via mouse control. They can use Fibonacci Projection & re-tracement levels. Cyclic analysis and projection are also available. Notes can be saved with a chart and textual annotations can be fixed to any point in a chart. Chart interpretation, called "Auto Alerts" can be activated and or customised on an indicator-by-indicator basis.

Market Scans:

The Market Scanner is broken into two main sections, namely statistical and indicator signals. The statistical part will rank shares based on percentage or physical moves in price, volume or value traded on a market sector or series basis over any given period with various combinations and

permutations.

The Indicator test side comes preloaded with numerous popular test scenarios that you can modify to your specific needs. Alternatively you can create as many custom tests as needed. Tests are performed on any Market sector or series of items. Tests can consist of up to ten different indicator scenarios (moving average crossed over indicator giving a buy, indicator turned down, indicator, above/below a given value, etc..) that signal a buy or sell condition. Any number of scenarios can be grouped together and final selection can be based on all being true or a percentage (highlight equity if 3 out of 5 tests are true). Results from each and every test you do can be individually saved for later reference. Results can be charted effortlessly with no further user input.

Market Optimisations:

Optimisation consists of testing every possible indicator period combination on a given item to find the period(s) that yield the most profitable results over a specified period. Brokerage, good/bad trade ratios, etc. can all be set to suit your trading/investment profile. Both the period(s) and the indicator and if needed a moving average used in conjunction with the indicator are found. Although this often involves analysis of the profit of hundreds of thousands of different combinations, the results are usually returned in tens of seconds to a few minutes, even for the most complex combinations. A Number of indicators on an entire range of items can be optimized in a single batch. Results are stored internally and associated with the data item and indicator so that no record keeping or user input is needed to use these results at any future stage.

Productivity:

The Workbook feature means that all items (trend lines, annotations, indicators, etc..) on a chart can be saved for that given item and then automatically or manually recalled the next time the chart is displayed. In addition, groups of screen layouts or templates can be saved (called function key overlays) and applied to any chart. These two features let the user view multiple indicators and data perspectives with negligible user input (no painful delete current indicator, select new indicator, select period, etc. to change indicators) as each layout can be assigned to a button (activated by a single click) or a function key (one key press completely changes your indicators).

Items that are looked at on a frequent basis can be grouped together under a descriptive name (called series). You select the series and the items are graphed with you switching from one graph to the next with a single command (Key or mouse).

All equities are pre-grouped into market sectors for you and can be viewed one after the other with a single command (Key or mouse).

Customisation:

Every item on the screen can be customized to suit the user from the colour, size and style of any chart, the colour, size and font of any text, etc.. Toolbars can be fully customized to contain the buttons you really need and these can be positioned at the most convenient screen location for your use. You can set most program options to default to what you often use (even pre-selecting certain default periods for certain indicators).

Future:

PrimeCharts is a small dynamic company that listens to users and has had the philosophy of giving users what they actually want, rather than what we think they want! Any reasonable request for further indicators, program features and/or customizability will be responded to. To this end the program is constantly revised to ensure the on-going elimination of obscure programming bugs, the refinement of existing features and the addition of new ones. At least every quarter, an enhanced version of the software is distributed to all our users at no additional cost.

Pricing:

to be confirmed.....

Beta Testers:

Before the release of software to the general public, PrimeCharts always conducts extensive beta testing to ensure all client situations are catered for, and that most software bugs are eliminated. This phase will commence at the beginning of March 2003. Should you wish to participate in this process,

which will require you to actively use the software and report your impressions and problems back to the development team, the software will be provided to you at no upfront cost (either now or at any future time). Additionally, there will be no monthly fee levied until such time as the software is officially released. At that time you will not be required to continue as a Market Master X-ec user should you not desire to do so.

If you would like to be a Beta Tester of Market Master X-ec for an existing Bloomberg Terminal, please e-mail info@primecharts.com for further details

Abstract (Document Summary)

myTrack is a fully integrated Internet-based online trading and market data system. Trading is offered at prices starting at \$12.95 per trade. myTrack is delivered over the Internet powered by application-based software and a constant server connection similar to systems used by professionals, as compared to most of its competitors that provide their service over HTML website-based static pages. myTrack delivers free streaming delayed quotes and unlimited free real-time extended quotes, as well as breaking company news, a trade by trade log, charting for technical analysis and a proprietary library of intraday market statistics. For \$19.98 per month plus exchange fees, users can subscribe to streaming real-time quotes. A menu of features, including Nasdaq Level II, is available separately or in value packages.

Full Text (390 words)*Copyright Business Wire Dec 27, 1999*

NEW YORK--(BUSINESS WIRE)--Dec. 27, 1999--[iTrack Data Corporation](#) (Nasdaq-NMS: TRAC) announced today that it added the BRUT ECN as another routing destination for trades placed through its myTrack service, an Internet-based online trading and market data service.

Barry Hertz, Chairman and CEO, commented, "We are pleased to complete this connection to BRUT. To best serve our customer base, we are adding routing sources for trades to continue to provide the fastest and best price executions available."

[iTrack Data](#) offers the first week of trading commission-free and recently announced that the last week of trading in December will also be free to celebrate the millennium. To open a trading account, go to <http://www.mytrack.com> and click on the "Open a Trading Account" button.

myTrack is a fully integrated Internet-based online trading and market data system. M2 PRESSWIRE-4 March 1999-SMARTBROKER: SMARTBROKER Pro ver 2.5 -- TRUE stock market analysis software for Windows 9x/NT (C)1994-99 M2 COMMUNICATIONS LTD

SMARTBROKER Pro for Windows 9x/NT is now available for download and try-it-before-you-buy-it evaluation. SMARTBROKER Pro prescreens stocks, identifies current market trends, and tells you which stocks are about to fall, and which will rise BEFORE they move.

SMARTBROKER identifies stock opportunities. In one package, it processes and manages text quote files, conducts Price & Volume Trend Analysis, provides Buy & Sell Recommendations, and produces Report Cards on itself. Don't bother with stock selection formulas and hair pulling analysis anymore. SMARTBROKER performs all the analysis for you and simply reports which stocks are buy opportunities and which to sell. SMARTBROKER can track and report on over 30,000 stocks. You will need an account with a stock quote data service (e.g. Prophet Information Services 650-322-4183 which charges \$19.95/month). Users can download files with any ftp capable browser (Netscape, [AOL](#), Exchange, etc.) or can use other exported quote files.

Use SMARTBROKER to prescreen stocks, identify current market trends, and help to predict market trends. First you complete a short questionnaire on financial conditions, then download and process at least five quote files at your leisure. After which, you need only process a quote file once on weekends. The program offers text tips on the impact of environmental trends on the market, summarizes extensive market data into usable form, then provides lists of buy and sell stocks, market trends, graphs of performance, and recommendations for your investment strategy. Sample data and ample help files will get you started.

Additional features include: * Full communications with fax receive capability * Three levels of interaction, including "slideshow mode" * Phone book features * Free upgrades (via web-downloads) * File customization feature allowing you to use practically any ASCII quote file exported from other applications * Autopilot Mode for downloading and processing quotes when using Dial/Data * 36 filters for restricting your universe when reviewing individual stocks * Free upgrades and free technical support via e-mail

After you try it, the registration/purchase fee is \$295.00. For more information, visit <http://hometown.aol.com/CwoolL97945/SB.htm> or send e-mail to SmartBroker@juno.com. Voice: (248) 557-4022

EVALUATION COPY ALWAYS AVAILABLE AT <http://hometown.aol.com/CwoolL97945/SB.htm>
